“Havana Syndrome”, correctly called NKBI (Non-Kinetic Brain Injury) which means that there is no concussion. The damage is done by “Directed Pulsed Energy in the Microwave Range”.

Anomalous Health Incident is correctly called NeuroStrike, which is an attack by a weapon causing neurocognitive disruption leading to NKBI, and serious irreversible Cognitive Damage.

We are aware of at least seven diagnosed domestic civilian cases of “Havana Syndrome”. One of them is on disability due to NKBI, despite the fact that the US Government doesn’t recognize any domestic civilian cases. What most people and physicians don’t understand, is the degree of irreversible brain degradation that these daily NeuroStrike cause, besides being extremely painful and incapacitating.

Below is a neuroimaging of the brain of a civilian with daily reoccurring Neurostrikes (sometimes multiple times a day), and “pre-morbid” dementia due to NKBI.

Using this direct method, there shouldn’t be any lines in the normal awaken brain. Both blue and orange lines represent broken neuronal connections. Taken 6 months apart, the increase in broken neural connections is 400%.

**“Havana Syndrome” is a serious public underreported, underdiagnosed public health issue, that according to a DC Attorney Mark Zaid representing government employees afflicted by NKBI, is a “government cover up”**
