Hello there,

Let's get straight to the point.

We've known each other for a while, at least I know you.

A few months ago, I gained access to your device, including your internet history and webcam. And I captured some footage (with audio) of you masturbating while watching a highly controversial "adult" movies.

It's unlikely that you'd want your family, colleagues, or contacts to watch the videos you're enjoying. Especially if it's your favorite genre.

(we both know what I'm talking about), I also plan to release these data on many websites and expose the real you.

Want proofs? : just ignore this e-mail and you will see.

Don't bother to reply this e-mail because is generated from a random server.

You may ask how did I do that?

You allowed my ransomware to your device while browsing on some unsecured websites. After that, I gained remote access to it. After infecting one device, I was able to access all other devices and your WiFi network without any issue. I'll just lay out a condition for you now. A little payment to save your reputation is a fair deal.

Transfer 2000 USD to my BTC(Bitcoin) wallet.

Wallet: 1P4ZgDofUJNQ53Xoqj1r148a9JjD1atDFj

Once the transfer is confirmed, I will remotely remove the virus from your devices, the data will be permanently deleted and you will never hear from me again.

Yes, it's a very tiny amount to pay to avoid ruining your reputation in the eyes of people who believe you to be a good person based on your interaction with them using messages. because I've been watching everything.

You have 48 hours - I'll be notified as soon as you open this email, and from then on it's a countdown. If you've never dealt with cryptocurrency before, it's super easy - search for "btc exchanger" "MoonPay" "BitPay", or else you can use cash to buy using Bitcoin ATM near you.
