

The Unvaccinated (2026)

New Book by Unbekoming: What a Forbidden Comparison Reveals About the True Cost of Vaccination

There is one study that would end the argument about childhood vaccination, and it has never been done. Take a large group of children given the full schedule, take a comparable group given none of it, and follow both for years across every measure of health.

The comparison ran itself anyway. Joy Garner's Control Group Survey gathered health data on completely unexposed Americans across forty-eight states and found a chronic-condition rate of 2.64 percent.

THE BOOK — The Unvaccinated makes the case against the childhood schedule completely, and on the establishment's own ground: what is actually in the injections, the legal architecture that removed liability and let the schedule expand, the financial machinery that pays compliance, and the buried history showing that the great killers had already retreated by ninety-five to ninety-eight percent before the injections arrived.

But the safety case, on its own, leaves the foundation standing — and the foundation is where the real corruption lives.

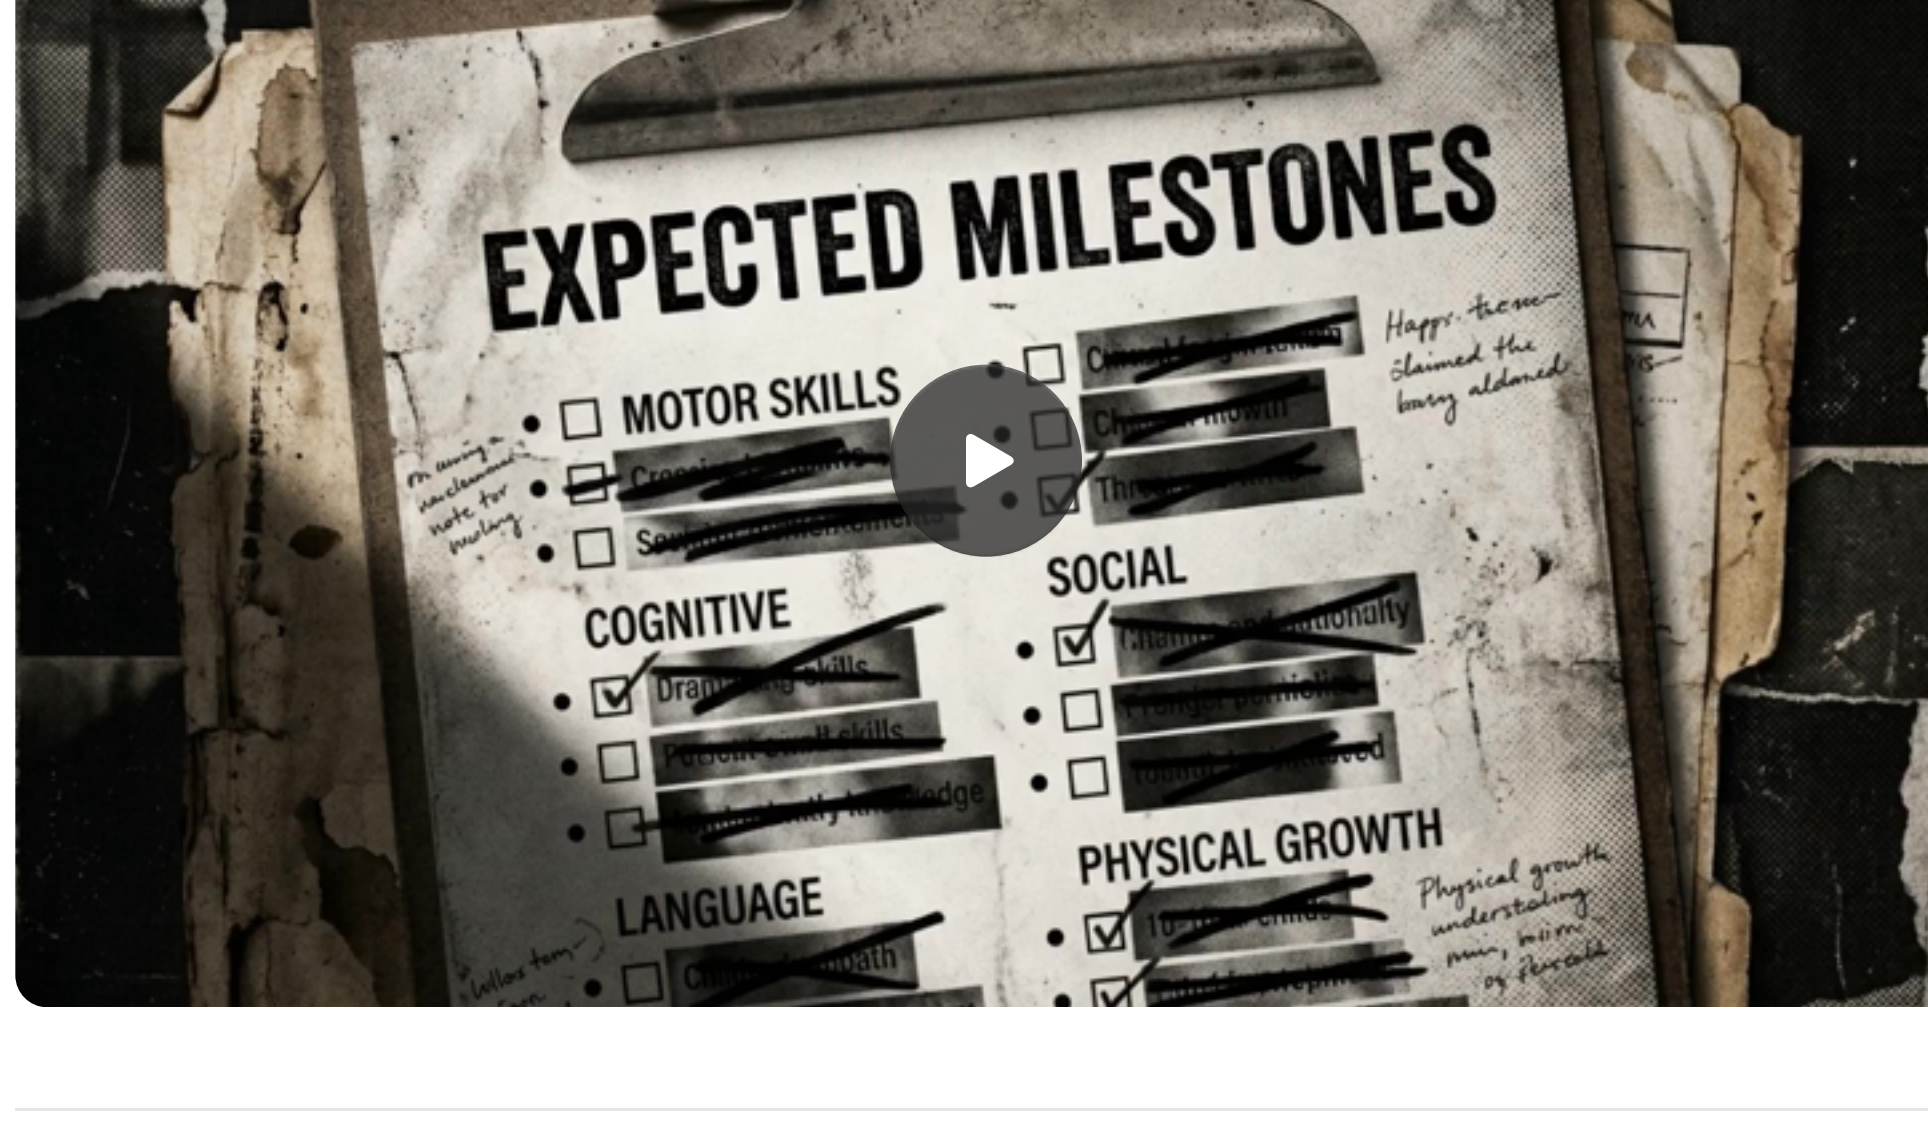

This work stays free because paid subscribers make it possible. They get the full book library, the Deep Dive Audio Library, and the Questions for Your Doctor, Before You Consent, and Package Insert series.

THE TRAP MOST OF THIS SPACE IS STILL IN — Almost everyone who fights vaccination fights it on safety, and almost everyone does it while standing inside an assumption neither side examines: that the diseases are caused by transmissible viral particles a properly made product could defend against.

I'll be plain about this, because the book is. Much of the writing collected here, including some of my own, was done when I was still inside that frame. The safety points are sound and I've left them as they were.

INSIDE — THE FIVE APPENDICES

Appendix 1 — The Refusal Toolkit. The prepared, wave-by-wave guide the delivery-room encounter is designed to defeat: what to print and bring, what the pressure sounds like at each stage from the casual assumption of consent through the turn to the mother to the threat of Child Protective Services, what is actually true underneath each wave, and how to answer without being drawn into a debate you were never meant to win.

Appendix 2 — What's Actually in the Vial. The contents, named one substance at a time with their amounts. The vitamin K "vitamin" whose inactive ingredients outweigh the active one by more than fifty to one, the aluminium that accumulates in tissue and does not clear, the surfactant chosen for its ability to open the barrier that protects the brain, and the manufacturers' own admission that none of it has been tested for cancer, mutation, or fertility effects.

Appendix 3 — The Legal Architecture: A Timeline. The protections laid out as a dated spine, from the 1969 warfare-program language through the 1986 liability shield to the 2022 court filing in which Pfizer reclassified its product as a Department of Defense prototype to which the ordinary rules did not apply.

Appendix 4 — The Terrain Reading of the Schedule. What injection actually does, described in terms of what the body is rather than the military metaphor of defence and attack: Richet's Nobel-honoured finding that injecting foreign protein sensitises rather than protects, the persistence of the metal load, and the slide from acute clearing into chronic management that Shelton mapped a century ago.

Appendix 5 — The Question Underneath. The piece no other book in this space writes. A tight executive summary of the case against virology and contagion: what "isolation" actually means and why it proves nothing, what the tests really detect, and the transmission experiments — Rosenau's among them, 161 volunteers during the deadliest outbreak on record, a 1.2 percent rate of illness — that were designed to confirm contagion and failed.

WHY THIS ONE IS FREE — This book is not behind the paywall. Every subscriber gets it. The people who most need to read it are the ones still arguing about dosage while standing on a foundation that was never sound, and a paywall is the last thing that should sit between them and the argument.

Audio Overview

IF YOU WANT TO GO ALL THE WAY DOWN — Appendix 5 is the summary. No Virus is the full reckoning: the isolation studies, the failed contagion experiments, and the disease-by-disease examination of influenza, the childhood illnesses, measles, polio, HIV/AIDS, and COVID.

The unvaccinated are not a fortunate minority who gambled and won. They are the evidence that the thing we were told was natural was done to us.

BEST book EVER!!! THANK YOU! You've done such incredible work here. And it's so EASY to read. It reads better than any suspense novel, mainly because you're a great writer, but also because this is NON-fiction, and imperative knowledge for people to have.

THANK YOU!!! Joy
